## BIXLIFE

## MICROCARD - WP7

Deep learning technique for the instance segmentation of cardiomyocytes

ORÖBIXLIFE

## Dataset

- Two useful channels: CX43 (gap junction) and WGA (cell membrane)

## OROBBIXLIFE

## Instance segmentation strategy

Attention UNET for semantic segmentation of cardiac cells

## ORŌBIXLIFE

## Instance segmentation strategy

- Analysis of connected component for instance segmentation.

- Focus on cells boundaries prediction and cells connectivity;

## ORŌBIXLIFE

## Loss function

Centerline dice (CIDice) loss

- Extract skeleton of the extracellular space from inverted mask and prediction;
- Intersection between skeleton of prediction and GT mask and vice versa

$$
\operatorname{Tprec}\left(S_{P}, V_{L}\right)=\frac{\left|S_{P} \cap V_{L}\right|}{\left|S_{P}\right|} ; \quad \operatorname{Tsens}\left(S_{L}, V_{P}\right)=\frac{\left|S_{L} \cap V_{P}\right|}{\left|S_{L}\right|}
$$

## ORȮBIXLIFE

## Instance segmentation strategy

Post processing

- Unclear border from WGA channel;
- Morphological operator for cell splitting;
- Watershed algorithm for retrieving the original segmentation.

ORȮBIXLIFE
